IDARATI Meta-Application, powered by a national wallet, at the service of citizens

As part of its mission to reform public administration, the Ministry of Digital Transition and Reform of Administration (MTNRA) aspires to co-develop, with various stakeholders, the IDARATI x.0 meta-application. This platform will bring citizens closer to public services by providing intelligent access to a wide range of services, going beyond simple centralized routing.

Methodologically, the project will strictly adhere to the principles of "Privacy by Design" and "Security by Design."

Building on the workshops initiated in 2024 by the National Commission for the Control of Personal Data Protection (CNDP) on personal data protection and the wallet concept—targeted at relevant institutions and regulators—the MTNRA and the CNDP are inviting several institutions to contribute to defining and validating the architectural options required to deploy a meta-application based on a smart national wallet. This wallet will rely on secure digital containers linked to the sovereign national identity card, provided by the General Directorate of National Security (DGSN).

The first signatory institutions and companies partnering with the MTNRA and the CNDP are:

- **Institutions:** the Ministry of Youth, Culture and Communication; Ministry of Equipment, Transport and Logistics; the National Agency for Land Conservation, Cadastre and Cartography (ANCFCC); the National Road Safety Agency (NARSA); and the National Social Security Fund (CNSS).
- **Companies:** IDAKTO, SHAREID, and La Marocaine Electronique des E-Services.

Additional institutions and companies are expected to join the initiative.
